

QI is the foundation when building and sustaining better healthcare systems. We provide every healthcare professional with the tools and knowledge to do, learn and share QI within their respective organization, while seamlessly linking users with a network of experts to facilitate and implement change from the ground up.

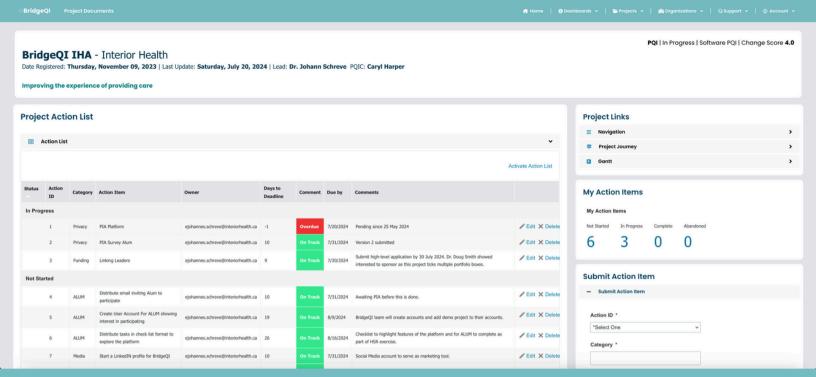

We are excited to share 3 new features within the BridgeQI Ecosystem

Project Action List

My QI Library

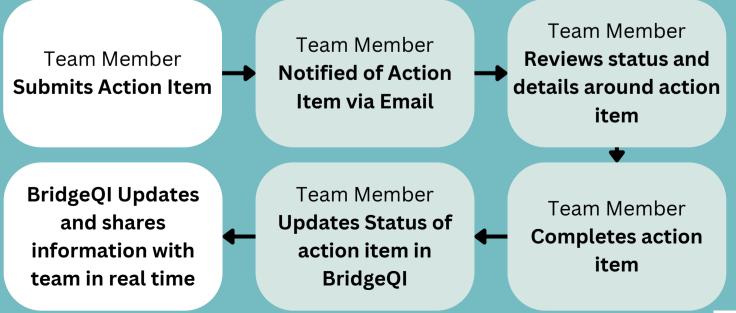

BQi Chat

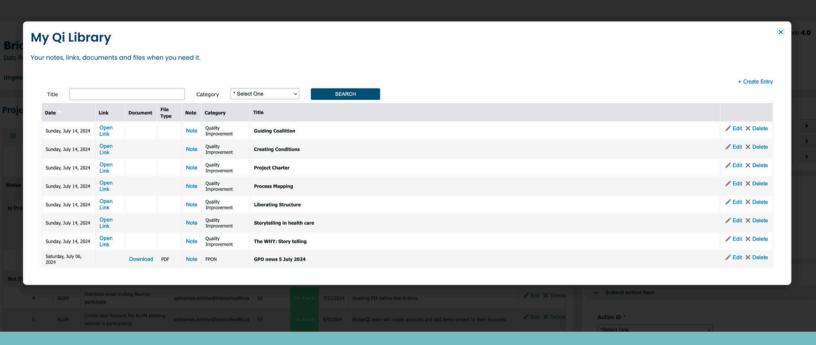

The Project Action List

Action lists provides teams with the ability to assign and view certain tasks during the QI journey. Due to clinical responsibilities and the reality of being bombarded with emails on a daily basis, BridgeQI includes an interactive action list that can be viewed and updated by all members of the team.

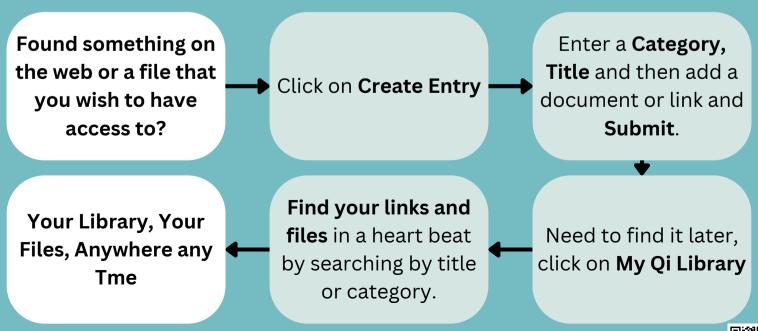

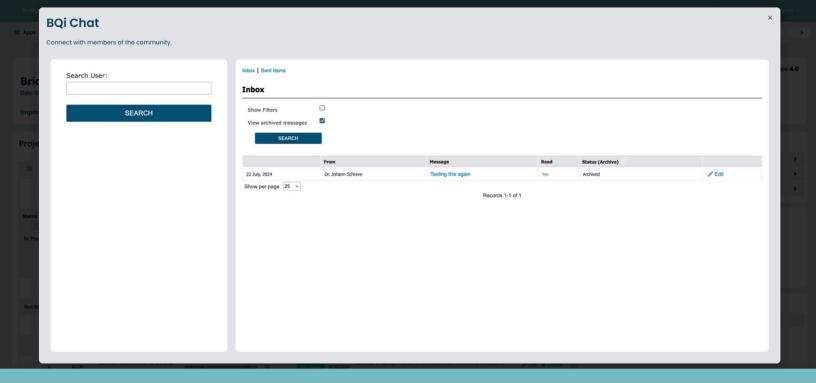

My Qi Library

My Qi Library is a directory of files and links that belongs to you. How often have you found that article or link on the web that helps you in your day to day life either as an improvement professional or health professional? Now, you can take it with you wherever you work.

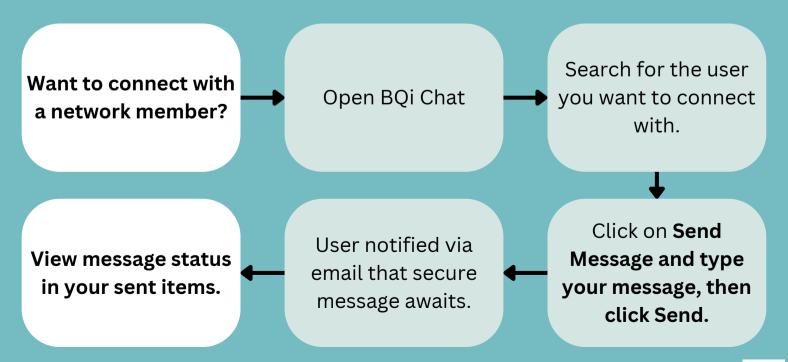

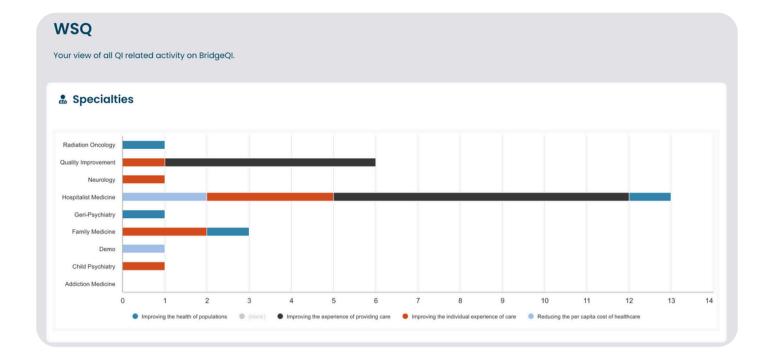

BQi Chat

We are excited to introduce BQi Chat, a messenger system integrated within the BridgeQI Digital Ecosystem. **BQi Chat** helps our network members to connect from any part within BridgeQI Ecosystem.

The Network

79Users

45
Projects

1 Shared Project

A custom designed digital ecosystem developed by physicians. Our solution standardize workflows, reduce rework and seamlessly integrate with an organizational portal to manage, guide and optimize quality improvement efforts. All this while capturing key metrics in real time within a dedicated QI dashboard.
